## Professional Summary

Backend Software Engineer with ~10 years of experience (Go since 2021) in payments, e-commerce and logistics. At Flip I build bill-payment, partner-integration and cashback services; previously led cloud migrations at ByteDance (up to **82%** cost reduction) and inventory systems at Tokopedia for **1,500+** sellers.

## Core Skills

**Languages**: Go, SQL
**Data & Messaging**: PostgreSQL, MySQL, Redis, Google Pub/Sub, NSQ
**Infrastructure**: GCP, Kubernetes, Docker, Terraform, GitLab CI, ArgoCD, Airflow, Prometheus, Grafana
**Backend & Payments**: Microservices, payment integrations, idempotency, reconciliation, TDD, Claude Code

## Experience

**Flip**, Jakarta *Jan 2026 – Present*
**Software Engineer (Backend)**

- Rebuilt postpaid bill payments (utilities, insurance, telco, internet) on a new Go microservice platform across ordering, billing and partner services, with PII masking and input validation; now covers **200+ bill providers**.
- Built a payment-partner integration service from scratch as primary author (idempotent transactions, status checks, callbacks, catalog sync) with a **zero-downtime** cutover; its volume grew **~6x** in five months.
- Shipped subsidized cashback for zero-commission products by adding targeting rules to a campaign engine; its A/B test showed a **double-digit conversion lift** at a fraction of projected cost before full rollout.
- Migrated two high-traffic customer features off the PHP monolith (feature-flagged cutover, batch backfill); together they serve **millions of requests per month**.
- Strengthened money correctness: automated settlement and reconciliation for a new partner, ran a partner reconciliation audit that flagged discrepancies, and root-caused pricing anomalies while on call.
- Built an AI agent workflow on Claude Code (knowledge base covering **17** services, review gates, internal tooling) and shipped **~400** merged MRs across **27** repositories in 10 months.

**ByteDance**, Jakarta *May 2024 – Oct 2025*
**Software Engineer (Backend)**

- As service owner, led the end-to-end migration of critical warehouse services from GCP to ByteDance's in-house cloud, cutting infrastructure cost **58%** and **82%** on key applications.
- Directed assessment, re-architecture and execution of every migration, with **100% successful** cutovers.
- Initiated Hertz (Go HTTP) clients for warehouse services, laying the groundwork to remove a proxy hop.

**Tokopedia / GoTo Logistics (GTL)**, Jakarta *Jan 2022 – May 2024*
**Software Engineer (Backend)**

- Led inventory tracking giving **1,500+** sellers self-service views of non-sellable stock, removing a 1-day SLA.
- Implemented inbound data differentiation, contributing to a potential **~70M IDR**/month storage-fee gain.
- Raised inventory data accuracy to **>99.9%** and cut manual effort **80%** via Airflow checks and a secure endpoint.

**Nusantara Baskara Jaya**, Jakarta *Nov 2016 – Dec 2021*
**Backend Web Developer**

- Built and maintained web applications for Telkomsel clients using Ruby on Rails, Laravel and CodeIgniter.
- Integrated the BNI payment gateway for a 2019 running event.

## Education

**Alterra Academy** – Advancing Career Program, Backend Golang *Oct 2021*
**Bogor Agricultural University (IPB)** – Bachelor of Computer Science *Sep 2011 – Feb 2016*
